

# SUPPLIER MANAGEMENT

EVALUATE AND COMMUNICATE PERFORMANCE POTENTIAL

AND PERFORMANCE RISKS WITH WEBCIS 4.0

## WHAT POTENTIAL AND RISKS ARE ASSOCIATED WITH THE EVER DECREASING IN-HOUSE PRODUCTION DEPTH IN COMPANIES?

Due to the constant relocation of processes, services and components, the task of purchasing requires the adequate development of suppliers and the correct assessment of the associated risk.

Supplier evaluation is part of this supplier management in WebCIS 4.0. The selection of suitable evaluation criteria, their weighting and the consideration of

the extent to which quality and logistics data and what kind of questionnaires should be used are important preliminary considerations for a useful and lived supplier evaluation.

At the end of the entire evaluation process, it is possible to provide not only evaluation points but also assessments of the development potential of a supplier and the risks associated with the transfer of tasks to an external third party. What has to be done to minimize these risks and what are the possible costs associated with this risk?
