

TOTAL SPEND ANALYSIS

MAVERICK-BUYING AND PAYMENT PROCESSES UNDER THE MICROSCOPE

ANALYSIS

WHAT IS NOT COVERED BY ORDERS IS OFTEN BEYOND THE INFLUENCE OF THE PURCHASING DEPARTMENT. BUT MAVERICK-BUYING IS NOT ALWAYS REQUIRED.

If a purchasing department is integrated into the strategic supplier management or not is the decisive question. WebCIS 4.0 enables a comprehensive and detailed spend analysis to show the potential for action by purchasing. Based on material groups or G/L accounts, the „white spots“ of purchasing

can be shown at the push of a button and its potential for influence can be defined. The spend analysis is rounded off by a focus on payment conditions as a component of working capital. Only the analytical processing of payment run data actually allows the payment duration, interest effect, cash discount benefit or cash discount loss to be measured. Precisely traceable at every level of action, from the benchmark of individual locations to supplier analysis, the control of payment conditions is effectively supported.
